As I have described, the capability or technology they are using is essentially TELEPATHY, or the transfer of thought from one person to another. These thoughts when concentrated in a certain way can transfer pain as I have described as attacks. This capability can also be used to control another person. By concentrating on another person, or myself in this instance, they can latch onto ones head or brain. They are essentially tapping into another persons head through thought. They can inflict pain, transfer non verbal communication, as well as move or excite body parts, such as arm or hand movement, just by transferring the thought. By transferring thought or suggestion they have the ability to affect ones behavior. This latching on is just as it seems, like a claw is grasping your head. It is not only a feeling that someone has taken ahold of your head, but you also get a feeling of dizziness durring these attacks. The severity of these feelings vary dependent, I am assuming, on the strength of the other person, or how many people are attempting to take control of your head. These suggestions are transfered using the same described telepathic technique, and I would also assume in a subconscious way as well. I would certainly describe these feelings and experiences to be in line with torture techniques. A recent article I uncovered describes torture, which I will include here. [CLICK HERE](#).

Since experiencing some of the things I have during this process, I have done research in the capabilities of our government. Remote Viewing is one area I have discovered which may be being used to some degree. Please review that area of the site to get a better understanding of what RV entails.

The phenomina I am describing is similar to Synthetic Technology, or V2K. My belief however is that these thought transfers are being made by use of telepathy. I will include a link here to Synthetic Telepathy for future reference...
